Attempt : 2

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement:

Miles is working on a program that involves analyzing two integers. He wants to check if either one of the integers is both:

Less than or equal to zero, and Odd. Can you help him create a program that identifies whether either of the integers meets these conditions?

Input Format

The input consists of two integers on separate lines, denoted as 'input1' and 'input2'.

Output Format

A single line with a boolean result (either 'true' or 'false') indicating whether either 'input1' or 'input2' is both less than or equal to zero and odd.

Refer to the sample output for format specifications

Sample Test Case

Input: -45

10

Output: true

Answer

```
import java.util.Scanner;
```

```
class Main {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
  
        // Read input values  
        int input1 = scanner.nextInt();  
        int input2 = scanner.nextInt();  
  
        // Check the condition if either number is <= 0 and odd  
        boolean result = (input1 <= 0 && input1 % 2 != 0) || (input2 <= 0 && input2 %  
        2 != 0);  
  
        // Output the result  
        System.out.println(result);  
  
        // Close scanner to avoid resource leak  
        scanner.close();  
    }  
}
```

Status : Correct

Marks : 10/10
